COMOR-M-136

Review of Nuclear Energy Targets in China

2. COMOR considered the report of the Working Group on the above subject. The agreed version is issued as COMOR-D-25/17. This represents both the reply to the Director of Central Intelligence on his request for a careful investigation of possible nuclear energy associated targets remaining in Communist China and a levy of requirements on Operations.

Further Requirements for Sino-Indian Border

3. When the decision was made to conduct U-2 reconnaissance in connection with the Sino-Indian border conflict, the Committee on Overhead Reconnaissance on request submitted the intelligence community's target requirements in this area. These targets were based upon the desire for base-line coverage to determine the extent of the Chinese logistical buildup in support of its military operations. As a result of the coverage to date the bulk of these targets have been covered. COMOR has been requested to submit target guidance for planning the one remaining mission for which approval exists. In COMOR's view the residual targets need not be covered at this time although they remain on file with the operator and may require coverage at some time during the next few months.
